

Pathway:	Vasectomy under General Anaesthetic (GA)
Referral Criteria/Commissioning position:	
<p><i>Vasectomies are routinely commissioned under local anaesthetic. GA procedures are only considered where:</i></p> <ul style="list-style-type: none"> • there are exceptional clinical circumstances when the requests for funding are submitted by the clinician to the Individual Funding Request (IFR) panel 	
Information to include in referral letter:	
<p><i>The GP referral should contain:</i></p> <ul style="list-style-type: none"> • Current contraception • Age of youngest child • Confirmation the patient & their partner aware of the procedure and impact • Any relevant medical history • Current regular medication • BMI • Smoking status • Alcohol consumption <p><i>If required – through the IFR panel</i></p> <ul style="list-style-type: none"> • Reason for GA request <p>Investigations prior to referral</p> <ul style="list-style-type: none"> • None 	
References & Additional information:	
<p>Most vasectomies are carried out under local anaesthetic. This means only the scrotum and testicles will be numbed.</p> <p>The RCOG Guidelines recommend general anaesthetic will usually be used if there is a history of allergy to local anaesthetic and/or surgery has been carried out before on the scrotum or genital area. In this case, a request should be made to the IFR panel.</p> <p>The RCOG Guidelines also recommend a ‘no-scalpel’ approach as there are lower levels of complications such as bleeding, pain and infection, the use of fascial interposition or diathermy, clips are not used due to high failure rates; local anaesthetic is used wherever possible, effective contraception be used before the operation and until follow-up tests show the vasectomy has been successful and that practitioners must be trained to the level of the FSRHC requirement.</p> <p>References:</p> <ul style="list-style-type: none"> • World Health Organisation.
